

1 Who is the survey contact?

#### **FORM EIA-860**

## ANNUAL ELECTRIC GENERATOR REPORT

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

**NOTICE:** This report is **mandatory** under the Federal Energy Administration Act of 1974 (Public Law 93-275). Failure to comply may result in criminal fines, civil penalties and other sanctions as provided by law. For further information concerning sanctions and disclosure information, see the provisions stated on the last page of the instructions. **Title 18 USC 1001 makes** it a criminal offense for any person knowingly and willingly to make to any Agency or Department of the United States any false, fictitious, or fraudulent statements as to any matter within its jurisdiction.

#### **SCHEDULE 1. IDENTIFICATION**

The survey contact is the person that completes	and submits the data.			
First Name	Last Name			
Title				
Address				
City	State		Zip Code	
Phone	Ext		Fax	
Cell Phone				
Email				
. Who is the survey contact's supervisor	?			
First Name	Last Name			
Title				
Address				
City	State		Zip Code	
Phone	Ext		Fax	
Cell Phone				
Email				
. What is the name and address of the re	porting entity?			
Entity Name				
Entity Address				
City	State		Zip Code	
. What is the reporting entity's relationsh Check all that apply.	nip to the power pla	ants reported on	Schedule 2?	
Owner				
Operator				
Asset Manager				
Other – Explain:				

5. What typ	be of entity is the principle owner and/or operator for the power plants reported on this form?
	Cooperative
	Investor-Owned Utility (IOU)
	Independent Power Producer (IPP)
	Municipally-Owned Utility
	Political Subdivision
	Federally-Owned Utility
	State-Owned Utility
	Industrial (principal business is not electricity generation)
	Commercial (principal business is not electricity generation)

If you have a question about the data requested on this form, email  $\underline{\text{EIA-860@eia.gov}}$  (preferred) or contact one of the survey managers listed below.

## ANNUAL ELECTRIC GENERATOR REPORT

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### **SCHEDULE 2. POWER PLANT DATA**

#### Complete one SCHEDULE 2 for:

- · Each operable power plant;
- Each coal and nuclear plant planned for initial commercial operation within 10 years; or
- Each plant fueled by any energy source other than coal and nuclear planned for initial commercial operation within 5 years.

	name and EIA Plant Code for this plant?  blank if this is the first submission for this plant.
Plant Name	
<b>EIA Plant Code</b>	
2. What is this plant's - If plant does not have a	permanent physical address, note in SCHEDULE 7.
Street Address	
County	
City	
State	Zip Code
3. What is this plant's - Enter coordinates for ce - Report latitude and long	
Plant Latitude	
Plant Longitude	
4. Which North Ameri	can Electric Reliability Corporation region does this plant operate in?
<ul><li>5. What is this plant's</li><li>A balancing authority ma</li></ul>	anages supply, demand, and interchanges within an electrically defined area.
<ul> <li>If from an aquifer, enter</li> <li>Enter "Wells" if aquifer n</li> <li>Enter "Municipality" if wa</li> <li>Enter "UNK" for planned</li> </ul>	

7. What is this plant's steam plant type?  - Steam plant type will be entered by EIA staff.  - Respondents completing this form via internet data collection should contact EIA if this designation is incorrect.  [ ] 1. Plants with combustible-fueled steam-electric generators with a sum of 100 MW or more steam-electric nameplate capacity (including combined cycle steam-electric generators with duct firing).  [ ] 2. Plants with combustible-fueled steam-electric generators with a sum of 10 MW or more but less than 100 MW steam-electric nameplate capacity (including combined cycle steam-electric generators with duct firing).  [ ] 3. Plants with nuclear fueled generators, combined cycle steam-electric generators without duct firing and solar thermal electric generators using a steam cycle with a sum of 100 MW or more steam-electric nameplate capacity.  [ ] 4. Plants with non-steam fueled electric generators (wind, PV, geothermal, fuel cell, combustion turbines, IC engines, etc.) and electric generators not meeting conditions of categories above.
8. Which North American Industry Classification System (NAICS) Code that best describes this plant's primary purpose? - Select the NAICS code from Table 29 in the Instructions.
9a. Does this plant have Federal Energy Regulatory Commission Qualifying Facility (QF) Cogenerator status?  Yes – Continue to Question 9b  No – Continue to Question 10a
9b. List all applicable QF docket number(s) granted to this plant Include only numbers and dashes, excluding prefixes.
10a. Does this plant have Federal Energy Regulatory Commission Qualifying Facility (QF) Small Power Producer status?  Yes – Continue to Question 10b  No – Continue to Question 11a
10b. List all applicable QF docket number(s) granted to this plant Include only numbers and dashes, excluding prefixes.
11a. Does this plant have Federal Energy Regulatory Commission Qualifying Facility (QF) Exempt Wholesale Generator status?  Yes – Continue to Question 11b  No – Continue to Question 12a
11b. List all applicable QF docket number(s) granted to this plant Include only numbers and dashes, excluding prefixes.
12a. Is there an ash impoundment (e.g. pond, reservoir) at the plant?  Yes – Continue to Question 12b

12b. Is this ash impoundment lined?
Yes – Continue to Question 12c
No – Continue to Question 13
12c. What was this ash impoundment's status as of December 31 of the reporting year? - Select from Table 1 in SCHEDULE 2 Instructions.
13. Who is the current owner of the transmission lines and/ or distribution facilities that this plant is interconnected to?
<ul> <li>14. What is this plant's grid voltage at the point(s) of interconnection to transmission or distribution facilities?</li> <li>- Enter up to three grid voltages.</li> <li>- If more than three, enter three highest grid voltages.</li> </ul>
Kilovolts
Kilovolts
Kilovolts
15. Does this facility have energy storage capabilities?
Yes
No
<ul> <li>16a. If this facility has an existing natural gas-fired generator for which it has a pipeline connection to a Local Distribution Company (LDC), provide the name of the LDC.</li> <li>Skip this question if the plant does not receive natural gas.</li> </ul>
<ul> <li>16b. If this facility has an existing natural gas-fired generator and has a pipeline connection other than to a Local Distribution Company, provide the name(s) of the owner or operator of each natural gas pipeline that connects directly to this facility or that connects to a lateral pipeline owned by this facility.</li> <li>Skip this question if the plant does not receive natural gas.</li> </ul>
16c. Does this facility have on-site storage of natural gas? - Skip this question if the plant does not receive natural gas.
Yes
No
Not Applicable

16d. If this facility has on-site storage of natural gas, does the facility have the capability to store the natural gas in the form of liquefied natural gas?  Skip this question if the answer to 16c was 'No'.
Yes
No
Not Applicable

#### **ANNUAL ELECTRIC GENERATOR REPORT**

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### **SCHEDULE 3. GENERATOR INFORMATION**

#### SCHEDULE 3, PART A. GENERATOR INFORMATION - GENERATORS

Complete one SCHEDULE 3, Part A for each generator at this plant that is:

- In commercial operation;
- Capable of commercial operation but currently inactive or on standby;
- Expected to be in commercial operation within 10 years in the case of coal and nuclear generators; or
- Expected to be in commercial operation within 5 years for all generators other than coal and nuclear generators.

Plant Name	
<b>EIA Plant Code</b>	
- Generator ID is the iden	tor ID for this generator?  tification most commonly used by plant management to reference this generator.  s restricted to five characters and cannot be changed once provided to EIA a generator.
2. What is this gener	ator's prime mover?
	e from Table 2 in SCHEDULE 3, Part A Instructions. s, enter a prime mover code for each generator.
<ul> <li>A unit or multi-generator combined cycle unit).</li> <li>Each generator operatir</li> </ul>	tor's unit or multi-generator code?  code is the unique 4-character code associated with multiple generators that operate as a single unit (such as a g as a single unit should have the same unit or multi-generator code. rator does not operate as a single unit with another generator.
	tor's ownership code?  JLE 3, Part A instructions for list of ownership codes.
	r have duct burners for the supplementary firing of the turbine exhaust gas? ors with a combined cycle prime mover code of CA, CS or CC.
Yes	
No	
	operate while bypassing the heat recovery steam generator? ors with a combined cycle prime mover code of CT or CC.
Yes	
No	
If this generator operates Operator (ISO) and the	what is the RTO/ISO LMP price node designation? s in an electric system operated by a Regional Transmission Organization (RTO) or Independent System RTO/ISO calculates a nodal Locational Marginal Price (LMP) at the generator location, then provide the nodal ntify the price node in RTO/ISO LMP price reports.

#### 7b. For this generator what is the RTO/ISO location designation for reporting wholesale sales data to FERC?

- If this generator operates in an electric system operated by a Regional Transmission Organization (RTO) or Independent System Operator (ISO) and the generator's wholesale sales transaction data is reported to FERC for the Electric Quarterly Report, then provide the designation used to report the specific location of the wholesale sales transactions to FERC. In many cases the RTO/ISO location designation may be the same as the RTO/ISO LMP price node designation submitted in line 7a. In these cases enter the same response in both line 7a and line 7b.

**Plant Name**

# ANNUAL ELECTRIC GENERATOR REPORT

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020 Burden: 9.40 Hours

#### SCHEDULE 3, PART B. GENERATOR INFORMATION - OPERABLE GENERATORS

Complete one SCHEDULE 3, Part B for ea	ch generator at this plant that	at is in commercial operat	ion or capable of o	commercial
operation.				

EIA Plant Code	
	awatts as measured in alternating current. It amperes, convert to megawatts using formula in SCHEDULE 3, Part B instructions.
Megawatts	
•	nameplate power factor? e one used to convert the generator's kilovolt ampere measure to megawatts in Question 1a. turbines, batteries, fuel cells, and flywheels may skip this question.
<ul> <li>Report in megawatts as measure</li> <li>Round capacity to nearest tenth.</li> <li>If the net summer capacity exceed</li> </ul>	net winter capacity for primary fuel source. ed in alternating current. eds the nameplate capacity reported for Question 1A, explain in SCHEDULE 7. s report the peak net capacity during the day for the generator assuming clear sky conditions on June 21
Net summer capacity	Megawatts
Net winter capacity	Megawatts
Answer question 2b only if the	generator is powered by a photovoltaic solar technology
	of this photovoltaic generator in direct current (DC) under standard test conditions (STC) and 25 degrees Celsius PV module temperature?
Megawatts	
- Solar generators may skip this qu	nis generator operate at continuously? uestion. it code on SCHEDULE 3, Part A report load when all generators are operating at minimum load.
Megawatts	
4a. Was an uprate or derate լ	project completed on this generator during the reporting year?
Yes - Continue t	o Question 4b
No - Continue to	Question 5
4b. When was this uprate or o	derate project completed?
(MM-YYYY)	

<ul><li>5a. What was the status of</li><li>Select the status code from Ta</li></ul>			year?
- If status code is SB, go to Que		b of the instructions.	
- For all other status codes, go	to Question 6.		
5b. Is this generator equip	•		
- Answer only if the status code	reported in question 5a is Sl	В.	
Yes			
No			
6. When did this generator	r begin commercial oper	ation?	
(MM-YYYY)			
7. When was this generato	r retired?		
(MM-YYYY)			
8. If this generator will be r	retired in the next ten yea	ars, what is its estimated	retirement date?
(MM-YYYY)			
9. Is this generator associa	ated with a combined hea	at and power system?	
Yes - Continu	ue to Question 10		
No – Continue	e to Question 11		
	s produced first and any waste	e heat from that production is ι	used in a manufacturing or commercial application. and any waste heat is then used to produce
Topping			
Bottoming			
<ul><li>11. What is this generator's</li><li>Enter the energy source code</li><li>Select this energy source code</li></ul>	for the fuel used by this gene	erator in the greatest quantity d	uring the reporting year, as measured in Btus.
			for start-up and flame stabilization?
<ul> <li>Answer only for generators wh</li> <li>Enter the energy source code in Btus.</li> <li>Select this energy source code</li> </ul>	for the fuel used by this gene	erator for start-up and flame sta	bilization during the reporting year, as measured
0.			a
a.	b.	c.	d.

azimuth ang	nerators having fixed tilt technologies or single-axis technologies with a fixed azimuth angle, what is the gle of the unit? estion for units configured with an East-West Fixed Tilt (alternating rows) technology.
30b. For ger angle of the	nerators having fixed tilt technologies or single-axis technologies with a fixed tilt angle, what is the tilt unit?
31. What ma	aterials are the photovoltaic panels included in this generator made of? (Select all that apply.)
	Crystalline Silicon
	Thin-Film (CdTe)
	Thin-Film (A-Si)
	Thin-Film (CIGS)
	Thin-Film (Other)
	Other- Explain in SCHEDULE 7
32b. If the o	output from this generator part of a net metering agreement? Output from this generator is part of a net metering agreement how much DC capacity (in MW) is part of the g agreement (exclude virtual net metering)?
net meterni	g agreement (exclude virtual net metering):
33a. Is the c	output from this generator part of a known virtual net metering agreement?
	output from this generator is part of a known virtual net metering agreement how much DC capacity (in MW) e known virtual net metering agreement?
	stions on lines 34 through 38 only if generator is an energy storage device other than pumped storage or thermal mples include battery, flywheel, and compressed air).
34. What is	the nameplate energy capacity (MWh)?
35. What is	the maximum charge rate (MW)?

36. What is the maximum discharge rate (MW)?				
<ul> <li>37. For battery applications, what electro-chemical storage technology(s) are used?</li> <li>Enter all electro-chemical storage technologies used for battery applications</li> <li>Select storage technologies code(s) from Table 5b in the instructions.</li> </ul>				
38. What is the nameplate reactive power rating for the energy storage device?				
<ul><li>39. Which enclosure type best describes where the generator is located?</li><li>Select an enclosure type from Table 5c in the instructions.</li></ul>				
40. For which applications did this energy storage device serve during the reporting year (select all that apply)?				
Arbitrage				
Frequency Regulation or Frequency Response				
Load Following				
Ramping / Spinning Reserve				
Co-Located Renewable Firming				
Transmission and Distribution Deferral				
System Peak Shaving				
End-User Load Management				
Voltage or Reactive Power Support				
Backup Power				
Storing Excess Wind and Solar Generation				
PROPOSED CHANGES TO EXISTING GENERATORS				
If a capacity uprate is planned within the next 10 years, answer Questions 41a - 41c.				
41a. What is the expected incremental increase in the net summer capacity?				
Megawatts				
41b. What is the expected incremental increase in the net winter capacity?				
Megawatts				
41c. What is the planned effective date for this capacity uprate?				
(MM-YYYY)				
If a capacity derate is planned within the next 10 years, answer Questions 42a. – 42c.				
42a. What is the expected incremental decrease in the net summer capacity?				

Megawatts

42b. What is the expected incremental decrease in the net winter capacity?
Megawatts
42c. What is the planned effective date for this capacity derate?
- The planned effective date is the date that this generator is scheduled to re-enter operation after the modification.
(MM-YYYY)
If a repowering of this generator is planned within the next 10 years, answer Questions 43a. – 43d.
<ul><li>43a. What is the expected new prime mover for this generator?</li><li>Select prime mover code from Table 2 in the SCHEDULE 3, Part A of the Instructions.</li></ul>
43b. What is the expected new energy source for this generator? - Select this energy source code from Table 28 in the instructions
43c. What is the expected new nameplate capacity for this generator
-Report the expected value in megawatts as measured in alternating currentIf capacity is express in kilovolt amperes, convert to megawatts using formula in SCHEDULE 3, Part B instruction line 1aRound nameplate capacity to the nearest tenth.
Megawatts
<b>43d. What is the planned effective date for this repowering?</b> -The planned effective date is the date that this generator is scheduled to re-enter operation after this modification.
(MM-YYYY)
All respondents should answer question 44a.
44a. Are any other modifications planned within the next 10 years?
Yes – Explain in SCHEDULE 7
No .
If other planned modifications for this generator were indicated in Question 44a., then answer Question 44b.  44b. What is the planned date of these other modifications?
(MM-YYYY)
All respondents should answer question 45a. 45a. Can this generator burns multiple fuels?
Yes
No
If the answer to this question is "No," go to SCHEDULE 3, PART C. GENERATOR INFORMATION - PROPOSED GENERATORS.
<b>45b. Can this generator co-fire fuels?</b> Note: <b>Co-firing</b> means the simultaneous use of two or more fuels by a single combustion system to meet load. Co-firing excludes the limited use of a secondary fuel for start-up or flame stabilization
Yes
No

If this generator can co-fire fuels, answer Question 45c.
<b>45c. What are the fuel options for co-firing?</b> -Skip this question if the generator cannot co-fire fuels.
Chip this question if the generator earmored increase.
All respondents should answer question 46a.
46a. Can this generator switch between oil and natural gas?
Note: <i>Fuel switching</i> means the ability of a combustion system running on one fuel to replace that fuel in its entirety with a substitute fuel. Fuel switching excludes the limited use of a secondary fuel for start-up or flame stabilization
-Answer yes if the combustion system that powers this generator has, in operating order, the equipment AND the regulatory permits necessary to do so.
Yes
No
If this generator can switch between oil and natural gas, answer Questions 46b50b.
46b. Can this generator switch between oil and natural gas when operating? -Skip this question if the generator cannot switch between oil and natural gas.
Yes
No
47a. What is the maximum net summer output achievable when running on natural gas? -When providing this figure take into account all applicable legal, regulatory, and technical limits.
Megawatts
47b. What is the maximum net winter output achievable when running on natural gas? -When providing this figure take into account all applicable legal, regulatory, and technical limits.
Megawatts
48a. What is the maximum net summer output achievable when running on oil?
-When providing this figure take into account all applicable legal, regulatory, and technical limits.
Megawatts
48b. What is the maximum net winter output achievable when running on oil?  -When providing this figure take into account all applicable legal, regulatory, and technical limits.
Megawatts
49a. How much time is required to switch the generator from using 100 percent natural gas to 100 percent oil?
0 to 1 hours
Over 1 hours to 6 hours
Over 6 hours to 24 hours
Over 24 hours to 72 hours
Over 72 hours
Unknown or uncertain

49b. How much time is required to switch this generator from using 100 percent oil to using 100 percent natural gas?
0 to 1 hours
Over 1 hours to 6 hours
Over 6 hours to 24 hours
Over 24 hours to 72 hours
Over 72 hours
Unknown or uncertain
50a. Are there factors that limit this generator's ability to switch from natural gas to oil or from oil to natural gas?
Yes - Continue to Question 50b
No
50b. Which factors limit this generator's ability to switch from natural gas to oil or from oil to natural gas? -Select all that apply.
Limited On-Site Fuel Storage
Air Permit Limits
Other- Explain in SCHEDULE 7

# ANNUAL ELECTRIC GENERATOR REPORT

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020 Burden: 9.40 Hours

#### SCHEDULE 3, PART C. GENERATOR INFORMATION - PROPOSED GENERATORS

COMPRES ONE SCHEDULE S. PAILC TO	ie SCHEDULE 3, Part C	for:
----------------------------------	-----------------------	------

- Each coal or nuclear generator expected to be in commercial operation within 10 years at this plant; and
- Each generator fueled by any other primary energy source planned for initial commercial operation within 5 years at this plant.

Plant Name	
EIA Plant Code	
1a. What is the expected nameplate capace - Report the highest value in megawatts as meas - If capacity is expressed in kilovolt amperes, con - Round nameplate capacity to the nearest tenth.	ured in alternating current. vert to megawatts using formula in SCHEDULE 3, Part C of the instructions.
Megawatts	
1b. What is this generator's expected nar - Use the same power factor as the one used to d	neplate power factor? convert the generator's kilovolt ampere measure to megawatts in Question 1a.
2. What is the expected net capacity for the Report the expected net summer capacity and earlier Report in megawatts as measured in alternating Round capacity to nearest tenth.	expected net winter capacity for primary fuel source.
Expected Net summer capacity	Megawatts
Expected Net winter capacity	Megawatts
What was the status of this proposed g     Select a status code from those listed in Table 6	enerator as of December 31 of the reporting year?  5, SCHEDULE 3, Part C Instructions.
<ul> <li>4. What is the planned original effective defective date is the date the completed.</li> <li>This date should only be reported once, and should only be reported once.</li> </ul>	at this generator was scheduled to enter operation after construction was
(MM-YYYY)	
5. What is the planned current effective da - The planned current effective date is the date that	
(MM-YYYY)	
6. Will this generator be associated with a	combined heat and power system?
Yes	
No	

# ANNUAL ELECTRIC GENERATOR REPORT

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020 Burden: 9.40 Hours

7. Is this generator part of a site that was previously reported as indefinitely postponed or cancelled?
Yes
No
Unknown
<ul> <li>8. What is the predominant expected energy source for this generator?</li> <li>Enter the energy source code for the fuel used in the greatest quantity to fuel this generator, as measured in Btus.</li> <li>Select this energy source code from Table 28 in the instructions.</li> </ul>
<ul> <li>9. What is the second most predominant expected energy source for this generator?</li> <li>- Enter the energy source code for the fuel expected to be used in the second greatest quantity to fuel this generator, as measured in Btus.</li> </ul>
- Select this energy source code from Table 28 in the instructions.
10. What other energy sources do you expect to use for this generator?
<ul> <li>Enter the energy source codes for all other fuels you expect this generator to use in descending order as measured in Btu.</li> <li>Select energy source code(s) from Table 28 in the instructions.</li> </ul>
11. How many turbines, or hydrokinetic buoys is this generator expected to have?
<ul><li>12. What combustion technology will apply to this generator?</li><li>- Answer only if this generator will be fueled by coal or petroleum coke.</li></ul>
Fluidized Bed
Pulverized Coal
Stoker
Other – Explain in SCHEDULE 7
<ul><li>13. What steam conditions will apply to this generator?</li><li>- Answer only if this generator will be fueled by coal or petroleum coke.</li></ul>
Sub-Critical
Super-Critical
Ultra Super-Critical

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020 Burden: 9.40 Hours

14. Will this generator be part of a solid fuel gasification system?		
Yes		
No		
15. Will this generator be associated with a carbon dioxide capture process?		
Yes		
No		
no no		
16. Will this generator be able to burn multiple fuels?		
Yes		
No		
Undetermined		
If the answer is "No" or "Undetermined", go to SCHEDULE 4. OWNERSHIP OF GENERATORS OWNED JOINTLY		
OR BY OTHERS		
Note: <b>Co-firing</b> means the simultaneous use of two or more fuels by a single combustion system to meet load. <b>Fuel switching</b> means the ability of a combustion system running on one fuel to replace that fuel in its entirety with a substitute fuel. Co-firing and fuel switching exclude the limited use of a secondary fuel for start-up or flame stabilization		
17. Will the combustion system that powers this generator be able to switch between natural gas and oil?		
Yes		
No		
Undetermined		
18a. Will this generator co-fire fuels?		
Yes		
No		
18b. What will be the fuel options for co-firing? - Select up to six energy source code(s) from Table 28 in the instructions		

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### SCHEDULE 4. OWNERSHIP OF GENERATORS OWNED JOINTLY OR BY OTHERS

Complete one SCHEDULE 4 for each operable or planned generator that is:

- Jointly owned; or
- Wholly owned by another entity.

The total percentage of owner	rship reported on SCHEDULE 4 must	equal 100 pero	cent.		
Plant Name					
EIA Plant Code					
Generator ID					
	Owner's Ad	ddress			Danaant of
Name of Owner	City	State	ZIP Code	EIA Owner Code	Percent of Generator Owned
Total Percent of Generato	r Owned				100

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### SCHEDULE 5, PART A. GENERATOR CONSTRUCTION COST INFORMATION - COAL AND NUCLEAR GENERATORS

Complete one SCHEDULE 5, Part A for each <u>coal or nuclear</u> generator that, during the reporting year:

- Began commercial operation; or
- · Was under construction, in final testing or in the process or receiving permits and regulatory approvals; or
- Was a nuclear generator that has applied for a combined operating license from the Nuclear Regulatory Commission

was a nuclear generator that has applied for a combined operating license from the Nuclear Regulatory Commission.
Plant Name
EIA Plant Code
Generator ID
<ul> <li>1. What is the total construction cost for this generator? (rounded to the nearest thousand dollars)</li> <li>- Exclude financing, land acquisition or leasing, government grants, tax benefits, and other incentives from this number.</li> </ul>
(Thousand Dollars)
2. What are the total financing costs for construction of this generator? (rounded to the nearest thousand dollars)
(Thousand Dollars)
<ul><li>3. What is the total cost to construct this generator including financing costs? (rounded to the nearest thousand dollars)</li><li>This value should be the sum of values in lines 1 and 2.</li></ul>
(Thousand Dollars)

(Thou	isand Dollars)		
3. What is the total cost to construct this generator including financing costs? (rounded to the nearest thousand dollars)			
- This value should be the sum of	values in lines 1 and 2.		
(Thou	isand Dollars)		

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

## SCHEDULE 6. BOILER INFORMATION PART A. PLANT CONFIGURATION AND EQUIPMENT INFORMATION

For plants with a total steam-electric nameplate capacity of 10 MW or greater:

Complete SCHEDULE 6, Part A for existing and planned boilers and associated equipment that serve combustible-fueled steam electric generator(s) and/or combined cycle steam generator(s) with duct firing.

Plant Name	
EIA Plant Code	
the identi generato appropria under ea <b>selective</b> <b>will requ</b> codes are	uipment is associated with each boiler at this plant? For each boiler and associated equipment, enter fication codes most commonly used by plant management. If two or more pieces of equipment (e.g., two rs) are associated with a single boiler, report each identification code separated by commas under the te boiler. If any equipment is associated with multiple boilers, repeat the equipment identification code ch boiler. Do not change prepopulated equipment identification codes. (Note equipment such as a catalytic reduction, activated carbon injection, and dry sorbent injection into a fluidized bed boiler ire an identification code entry as these were not collected in past reporting years). Identification a generally restricted to six characters and cannot be changed once provided to EIA. However, tion codes for generators are restricted to five characters.

Row	Туре	Equipment Identification	Equipment Identification	Equipment Identification	Equipment Identification	Equipment Identification	Equipment Identification	Equipment Identification
1	Boiler ID							
2	Associated Generator(s)							
3	Associated Cooling System(s)							
4	Associated Particulate Matter Control System(s)							
5	Associated Sulfur Dioxide Control System(s)							
6	Associated NOX Control (SCR/SNCR)							
7	Associated Mercury Control(s) (ACI)							
8	Associated Stack(s) or Flue(s)							

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

## SCHEDULE 6. BOILER INFORMATION PART A. PLANT CONFIGURATION AND EQUIPMENT INFORMATION

For plants with a total steam-electric nameplate capacity of 10 MW or greater:

Complete SCHEDULE 6, Part A for existing and planned boilers and associated equipment that serve combustible-fueled steam electric generator(s) and/or combined cycle steam generator(s) with duct firing.

#### 2. What are the characteristics of each piece of emissions control equipment?

#### Column A:

Select the equipment type from Table 7 in SCHEDULE 6, Part A of the instructions for each operating, out-of-service, under construction or planned piece of equipment at this plant.

#### Columns B to E:

Enter the identification codes from the above table in the appropriate columns for emissions controls. If a piece of equipment controls multiple air emissions, enter the appropriate code in multiple columns (for example, if a wet scrubber controls for both sulfur dioxide, particulate matter and mercury, enter the associated identification code from the table above in Columns B, C and E).

- For Particulate Control (PM) equipment, enter identification code(s) in Column B
- For Sulfur Dioxide Control (SO2) equipment, enter the identification code(s) in Column C
- For Nitrogen Oxide Control (NOx) equipment, enter the identification code(s) in Column D
- For Mercury Control (Hg) equipment, enter the identification code(s) in Column E
- For HCl gas control, enter an X in Column F (no identification codes are required).
- For Column G, enter the status for the equipment as of December 31 of the reporting year from Table 8 in the instructions.
- For Column H, enter the date (MM-YYYY) the equipment began operation.
- For Column I, enter the date (MM-YYYY) the equipment retired or is expected to retire. If the expected retirement date is unknown leave blank
- For column J, enter the total installation cost for each piece of equipment.

Equipment Type	PM Control ID	SO2 Control ID	NOX Control ID	Mercury Control ID (ACI)	Acid Gas Control (HCI)	Status	In-service Date	Retirement Date	Total Costs (Thousand Dollars)
(A)	(B)	(C)	(D)	(E)	(F)	(G)	(H)	<b>(I)</b>	(J)

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

## SCHEDULE 6, PART B. BOILER INFORMATION AIR EMISSIONS STANDARDS AND CONTROL STRATEGIES

For plants with a total steam-electric nameplate capacity of 10 MW or greater but less than 100MW:

Complete ONLY questions 1,3 to 8, 11,12, 13 and 14 (SO2, NOx and Mercury questions) SCHEDULE 6, Part B for each boiler and its associated equipment that serve combustible-fueled steam electric generators or combined cycle steam generators with duct firing.

For plants with a total steam-electric nameplate capacity of 100 MW or greater:

Complete one SCHEDULE 6, Part B in its entirety for each boiler and its associated equipment that serve combustible-fueled steam electric generators and combined cycle steam generators with duct firing.

Plant Na	me

# ANNUAL ELECTRIC GENERATOR REPORT

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### SCHEDULE 6, PART C. BOILER INFORMATION - DESIGN PARAMETERS

For plants with a total nameplate capacity of at least 10 MW but less than 100 MW:

• Answer ONLY Questions 1 through 3 of SCHEDULE 6, Part C for each boiler and its associated equipment that serve combustible-fueled steam electric generators, including combined cycle steam generators with duct firing.

For plants with a total nameplate capacity of 100 MW or greater:

•	Complete one SCHEDULE 6, Part C in its entirety for each boiler and its associated equipment that serve
	combustible-fueled steam electric generators, including combined cycle steam generators with duct firing.

Plant Name
EIA Plant Code
Boiler ID
1a. Is this boiler a heat recovery steam generator (HRSG)?
<ul><li>1b. What was this boiler's status as of December 31 of the reporting year?</li><li>Select the boiler status code from the list in Table 17 in the SCHEDULE 6, Part C instructions.</li></ul>
2. What is the actual or projected in- service date for this boiler? -If month is unknown, use June.
(MM-YYYY)
3. What is the actual or projected retirement date for this boiler? -If month is unknown, use June.
(MM-YYYY)
4. What type of boiler is this? -Select up to three codes from the list of firing codesfrom Table 18 in the SCHEDULE 6, PART C instructions.
5. What is the maximum continuous steam flow at 100 percent load for this boiler?
1000 lbs per hour
<ul> <li>6. What is the design firing rate at the maximum continuous steam flow for coal and petroleum coke?</li> <li>Enter firing rate data for the coal and petroleum coke, not for startup or flame stabilization fuels.</li> <li>For waste-heat boilers with auxiliary firing, enter the firing rate for auxiliary firing.</li> <li>Round to nearest tenth.</li> </ul>
tons per hour
<ul> <li>7. What is the design firing rate at the maximum continuous steam flow for petroleum liquids?</li> <li>Enter firing rate data for the petroleum liquids, not for startup or flame stabilization fuels.</li> <li>For waste-heat boilers with auxiliary firing, enter the firing rate for auxiliary firing.</li> <li>Round to nearest tenth.</li> </ul>

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

8.	What is the design firing	rate at the maximum	continuous steam	flow for natural gas?
•	Wildt is the acsign in in	, iate at tile illaxillialli	OCITINIACAS SICAIII	mon non matarar quo.

- Enter firing rate data for the natural gas, not for startup or flame stabilization fuels.
- For waste-heat boilers with auxiliary firing, enter the firing rate for auxiliary firing.
- Round to nearest tenth.

#### thousand cubic feet per hour

- 9. What is the design firing rate at the maximum continuous steam flow for energy sources other than coal, petroleum or natural gas?
- Enter firing rate data for other than coal, petroleum or natural gas, not for startup or flame stabilization fuels.
- For waste-heat boilers with auxiliary firing, enter the firing rate for auxiliary firing.

15. What is the total air flow (including excess air) at 100 percent load?

cubic feet per minute

- Round to nearest tenth.
- -Specify the primary fuel (see Table 28 for fuel codes) for which value is provided along with related measurement unit in SCHEDULE 7.
- 10. What is the design waste-heat input rate at maximum continuous steam flow for this boiler?
  million Btu per hour
  11. What fuels are used by this boiler in order of predominance?
   Select energy source code(s) from Table 28 in the instructions.
  12. What is the turndown ratio for this boiler?
   The turndown ratio is the boiler's maximum output to its minimum output (to the nearest 0.1).
  13. What is the efficiency of this boiler when it is burning reported primary fuel at 100 percent load? (to nearest 0.1 percent)

  percent
  14. What is the efficiency of this boiler when it is burning reported primary fuel at 50 percent load? (to nearest 0.1 percent)

  percent

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### 16. Does the boiler have a wet bottom or a dry bottom?

- For coal-capable boilers only.
  Wet Bottom is defined as having slag tanks installed at the furnace's throat to contain and remove molten ash from the furnace.

water hopper	is defined as having no slag tanks installed at the furnace's throat so bottom ash drops through the throat to bottom ash s. Wet or D for Dry.
17 lo tho h	oiler capable of fly ash re-injection?
ir. is the b	oner capable of my asmire-injection?
	Yes
	No

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### SCHEDULE 6, PART D. COOLING SYSTEM INFORMATION - DESIGN PARAMETERS

Complete SCHEDULE 6, PART I	O for plants with a total ste	am-electric nameplate	capacity of 100 MW	or greater including	9
-----------------------------	-------------------------------	-----------------------	--------------------	----------------------	---

- Nuclear generators;
- Combustible fueled steam electric generators, including combined cycle steam-electric generators with and without duct firing; and
- Solar thermal generators using a steam cycle.

7. What is the cooling water source code for this system?

- Select the cooling water source code from Table 21 in SCHEDULE 6, PART D of the instructions.

Plant Name		
EIA Plant Code		
- Enter the code commonly assoc	code of the cooling system? ciated by plant management with this cooling system. This should be the same code entered of Row 3. The identification code is restricted to six characters and cannot be changed once provi	
	nis cooling system as of December 31 of the reporting year? us codes in Table 19 of the SCHEDULE 6, PART D of the instructions.	
- For operating systems, enter the	jected in-service date of commercial operation for this cooling system? the date that this control began commercial operation. The date that this system is expected to begin commercial operation.	
(MM-YYYY)		
•	stem is this?  Able 20 in the SCHEDULE 6, PART D of the instructions  By if this plant has a downstream helper tower associated with all boilers at the plant instead of a	
4b. If this is a hybrid cooling	g system, what percent of the cooling load is served by dry cooling components	s?
Percent		
	water source for this cooling system? name of the water body entered in SCHEDULE 2, Question 6. keup water.	
	cooling system's discharge body of water? cation is different from cooling water source.	

# ANNUAL ELECTRIC GENERATOR REPORT

**FORM EIA-860** 

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020 Burden: 9.40 Hours

8. What type of cooling water is used for this system?

- Select the cooling water type from Table 22 in SCHEDULE 6, PART D of the instructions.
- 9. What is the design maximum cooling water flow rate at 100 percent load at intake?

Gallons per minute

- 10. What is the actual or projected in-service date for the chlorine discharge control structures and equipment?
- For operating equipment and structures, enter the date that this control began commercial operation.
- For planned equipment and structures, enter the date that this system is expected to begin commercial operation.

(MM-YYYY)

#### **COOLING PONDS**

- 11. What is the actual or projected in-service date for the cooling ponds?
- A cooling pond is a natural or man-made body of water that is used for dissipating waste heat from power plants.
- For operating cooling ponds, enter the date that the cooling pond began commercial operation.
- For planned cooling ponds, enter the date that the cooling pond expected to begin commercial operation.

(MM-YYYY)

- 12. What is the total surface area for the cooling ponds?
- A cooling pond is a natural or man-made body of water that is used for dissipating waste heat from power plants.

**Acres** 

- 13. What is the total volume of the cooling ponds?
- A cooling pond is a natural or man-made body of water that is used for dissipating waste heat from power plants.

Acre feet

#### **COOLING TOWERS**

- 14. What is the actual or projected in-service date for the cooling towers?
- For operating cooling towers, enter the date that the cooling pond began commercial operation.
- For planned cooling towers, enter the date that the cooling pond expected to begin commercial operation.

(MM-YYYY)

- 15. What types of cooling towers are at this plant or are planned to be at this plant?
- Enter all codes that apply from Table 23 in SCHEDULE 6, PART D of the Instructions.
- 16. What is the design rate of water flow at 100 percent load for the cooling towers?

Gallons per minute

17. What is the maximum design power requirement for the cooling towers at 100 percent load?

Megawatts

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

## INSTALLED COST OF COOLING SYSTEM EXCLUDING LAND AND CONDENSERS (Thousand Dollars)

# ANNUAL ELECTRIC GENERATOR REPORT

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020

Burden: 9.40 Hours

#### SCHEDULE 6, PART E. FLUE GAS PARTICULATE COLLECTOR INFORMATION

Complete SCHEDULE 6, Part E for each installed system or equipment that reduces particulate matter at:

- Combustible fueled steam electric generators where the plant's total steam-electric nameplate capacity is 10 MW or greater, or
- Combined cycle steam generators with duct firing, where the plant's total steam-electric nameplate capacity is 10 MW or greater.

Plant Name			
EIA Plant Code			
- This should be the same ID as er	Code associated with the equipment controlling particulate matter?  ntered on SCHEDULE 6, PART A, Line1, Row 4 (Associated Particulate Matter Control S  T E for each Particulate Matter Control ID.	ystems).	
Identification Co	ode		
-Enter flue gas particulate matter codes. These should be the same	culate matter control is this? control codes from the Table 24 in SCHEDULE 6, PART E of the instructions. Enter up to equipment types entered on SCHEDULE 6, PART A, LINE 2, COLUMN A for Particulate eded, enter in SCHEDULE 7, Comments.		
	DESIGN FUEL SPECIFICATIONS FOR ASH AND SULFUR

#### SCHEDULE 6, PART F. FLUE GAS DESULFURIZATION UNIT INFORMATION (INCLUDING COMBUSTION TECHNOLOGIES)

Complete one SCHEDULE 6, Part F for each system or equipment installed to control sulfur dioxide emissions at this plant.

Plant Name		
EIA Plant Code		
	code for the equipment associated with this sulfur dioxide control? s entered on SCHEDULE 6, PART A, Line 1, Row 5 (Associated Sulfur Dioxide Control Sys	stems).
Identification Co	ode	
	de control is this?  code(s) from the Table 25 in SCHEDULE 6, PART F of the instructions. These should be t, PART A, Line 2, Column A for Sulfur Dioxide Control.	he same
<ul><li>3. What type(s) of sorbent(s)</li><li>Select up to four sorbent codes f</li></ul>	s) is used by this unit? s from Table 26 in the SCHEDULE 6, PART F of the instructions.	
4. Is there any salable byprod	oduct recovery?	
Yes		
No		
<ul><li>5. What are the annual pond</li><li>Report requirements to the neare</li></ul>	•	
Acre feet		
6a. Is there a sludge pond as	ssociated with this unit?	
Yes		
No		
<b>6b. Is the sludge pond lined?</b> - Do not answer 6b if the response		
Yes		
No		
7. Can flue gas bypass the flue	flue gas desulfurization unit?	
Yes		
No		

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020 Burden: 9.40 Hours

8. What is the design specification for ash when burning coal or petroleun	n coke?		
Percent by weight (to the nearest 0.1)			
9. What is the design specification for sulfur when burning coal or petroleum coke?			
Percent by weight (to the nearest 0.1)			
10. What is the total number of flue gas desulfurization unit scrubber train	s or mod	ules?	
11. How many flue gas desulfurization unit scrubber trains or modules are	operated	l at 100 perce	nt load?
12. What is this unit's design removal efficiency for sulfur dioxide when operation - Report removal efficiency as the percent by weight of gases removed from the flue gas		t 100 percent	load?
Percent by weight (to the nearest 0.1)			
13. What is the design sulfur dioxide emission rate for this unit when ope	rating at 1	00 percent lo	ad?
Pounds per hour			
14. What is the flue gas exit rate for this unit?			
Actual cubic feet per minute			
15. What is this unit's flue gas exit temperature?			
Degrees Fahrenheit			
16. What percentage of flue gas enters the flue gas desulfurization unit wh	en opera	ting at 100 pe	rcent load?
percent of total			
INSTALLED COST OF FLUE GAS DESULFURIZATION UNIT, EXCLU	DING LAN	ID (Thousand	Dollars)
17. What are the installed or anticipated costs of all FGD structures and equipment, excluding land?			(Thousand Dollars)
18 What are the installed costs of the sludge transport and disposal system?	+		(Thousand Dollars)
19. What other installed costs are there pertaining to the installation of the FGD unit?	+		(Thousand Dollars)
20. What are the total installed costs of the FGD unit?	=		(Thousand Dollars)

#### **ANNUAL ELECTRIC GENERATOR REPORT**

Approval: OMB No. 1905-0129 Approval Expires: 03/31/2020 Burden: 9.40 Hours

### SCHEDULE 6, PART G. STACK AND FLUE INFORMATION - DESIGN PARAMETERS

For plants with a total steam-electric nameplate capacity of 100 MW or greater:	
Plant Name	
EIA Plant Code	
<ul> <li>1. What is this stack or flue equipment's identification code?</li> <li>Enter the Identification code commonly used by plant management for this stack or flue. This should be the same ID code on SCHEDULE 6, PART A, Line 1, Row 8.</li> </ul>	entered
<ul><li>2. What is the actual or projected in-service date for this stack or flue?</li><li>For operating units, enter the date that the unit began commercial operation.</li><li>For planned units, enter the date that this unit is expected to begin commercial operation.</li></ul>	
(MM-YYYY)	
<ul><li>3. What was the status of this stack or flue as of December 31 of the reporting year?</li><li>Select one status code from Table 27 in the SCHEDULE 6, PART G of the instructions.</li></ul>	
4. What is this stack's height at the top, as measured from the ground?	
Feet	
5. What is the cross-sectional area at the top of this stack?	
Square feet	
DESIGN FLUE GAS EXIT AT TOP OF STACK  6. What is the design flue gas exit rate at the top of the stack at 100 percent load?  - Rate is approximately equal to (cross-sectional area at the top of the flue) x (velocity) x 60.	
Actual cubic feet per minute	
7. What is the design flue gas exit rate at the top of the stack at 50 percent load?	
- Rate is approximately equal to (cross-sectional area at the top of the flue) x (velocity) x 60.	
- Rate is approximately equal to (cross-sectional area at the top of the flue) x (velocity) x 60.  Actual cubic feet per minute	
Actual cubic feet per minute	
Actual cubic feet per minute  8. What is the design flue gas exit temperature at the top of the stack at 100 percent load?
